d) The system shuts down and requires a manual restart

57. What is the primary goal of a multiprogramming operating system?

- a) Maximizing CPU utilization
- b) Minimizing memory usage
- c) Prioritizing real-time processing
- d) Optimizing input/output operations

58. What is the main advantage of a multiprogramming operating system?

- a) Increased security
- b) Enhanced user interface
- c) Improved system performance
- d) Greater hardware compatibility

59. In a multiprogramming operating system, what is the term used for the small unit of work that can be scheduled for execution?

- a) Process
- b) Thread
- c) Task
- d) Job

60. Which mechanism is used in a multiprogramming operating system to allocate CPU time among multiple processes?

- a) Time slicing
- b) Priority scheduling
- c) Round-robin scheduling
- d) Shortest job first scheduling

61. What is the purpose of context switching in a multiprogramming operating system?

- a) Loading a new program into memory
- b) Saving and restoring process state
- c) Handling input/output operations
- d) Allocating memory resources

62. Which operating system is an example of a multiprogramming system that introduced the concept of time-sharing?

- a) Windows
- b) macOS
- c) UNIX
- d) Linux

63. What is the primary goal of a time-sharing operating system?

- a) Maximizing CPU utilization
- b) Minimizing memory usage
- c) Prioritizing real-time processing
- d) Optimizing input/output operations

64. What is the main advantage of a time-sharing operating system?

- a) Increased security
- b) Enhanced user interface
- c) Improved system performance
- d) Greater hardware compatibility

65. In a time sharing operating system, what is the term used for the small unit of work that can be scheduled for execution?

- a) Process

- b) Thread
- c) Task
- d) Job

66. Which mechanism is used in a time-sharing operating system to allocate CPU time among multiple users or processes?

- a) Time slicing
- b) Priority scheduling
- c) Round-robin scheduling
- d) Shortest job first scheduling

67. What is the purpose of context switching in a time-sharing operating system?

- a) Loading a new program into memory
- b) Saving and restoring process state
- c) Handling input/output operations
- d) Allocating memory resources

68. Which operating system is widely regarded as one of the first successful time-sharing operating systems?

- a) Windows
- b) macOS
- c) UNIX
- d) Linux

69. What is the primary characteristic of a real-time operating system (RTOS)?

- a) Maximizing CPU utilization
- b) Minimizing memory usage
- c) Prioritizing real-time processing

- d) Optimizing input/output operations

70. What is the main purpose of a real-time operating system?

- a) Providing a user-friendly interface
- b) Supporting multitasking capabilities
- c) Enabling real-time task scheduling and execution
- d) Enhancing system performance

71. In a real-time operating system, which type of tasks have strict timing requirements and deadlines?

- a) Periodic tasks
- b) Background tasks
- c) Interactive tasks
- d) Synchronous tasks

72. Which scheduling algorithm is commonly used in real-time operating systems to ensure that tasks meet their deadlines?

- a) Round-robin scheduling
- b) First-Come, First-Served (FCFS) scheduling
- c) Earliest Deadline First (EDF) scheduling
- d) Shortest Job Next (SJN) scheduling

73. What is the main difference between hard real-time and soft real-time operating systems?

- a) Hard real-time systems have stricter timing constraints than soft real-time systems.

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

b) Soft real-time systems are used in embedded devices, while hard real-time systems are used in general-purpose computers.

c) Hard real-time systems can handle a higher number of tasks than soft real-time systems.

d) Soft real-time systems prioritize input/output operations, while hard real-time systems prioritize CPU utilization.

74. Which operating system is an example of a real-time operating system commonly used in embedded systems?

- a) Windows
- b) macOS
- c) Linux
- d) VxWorks

75. What is the primary purpose of a network operating system (NOS)?

- a) Managing computer hardware
- b) Enabling network connectivity and resource sharing
- c) Optimizing CPU utilization
- d) Providing a user-friendly interface

76. Which of the following is a characteristic of a client-server network operating system?

- a) All devices have equal capabilities and responsibilities.
- b) Network resources are centrally managed and controlled.
- c) Each device can act as both a client and a server.

d) The network operates in a peer-to-peer fashion.

77. What is the role of a network operating system in file and print sharing?

- a) Ensuring data security and encryption
- b) Managing network protocols and data transfer rates
- c) Controlling access to shared files and printers
- d) Optimizing network bandwidth and latency

78. Which network operating system is widely used in business environments and provides features such as directory services and centralized administration?

- a) Windows Server
- b) macOS
- c) Linux
- d) UNIX

79. In a network operating system, what is the function of a network file system (NFS)?

- a) Providing secure remote access to files
- b) Monitoring network traffic and bandwidth usage
- c) Managing network user accounts and permissions
- d) Enabling file sharing and access across different platforms

80. Which network operating system protocol is commonly used

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

for remote administration and file transfers?

- a) FTP (File Transfer Protocol)
- b) SMTP (Simple Mail Transfer Protocol)
- c) HTTP (Hypertext Transfer Protocol)
- d) SSH (Secure Shell)

81. What is the primary goal of a distributed operating system (DOS)?

- a) Maximizing CPU utilization
- b) Minimizing memory usage
- c) Enabling communication and resource sharing among networked computers
- d) Optimizing input/output operations

82. Which of the following is a characteristic of a distributed operating system?

- a) All processes run on a single computer.
- b) Resources are not shared among networked computers.
- c) Each computer operates independently without coordination.
- d) Computers work together as a unified system.

83. In a distributed operating system, what is the purpose of a distributed file system (DFS)?

- a) Managing network protocols and data transfer rates
- b) Controlling access to shared files and directories

- c) Optimizing network bandwidth and latency
- d) Enabling file sharing and access across multiple computers

84. Which distributed operating system is known for its scalability, fault tolerance, and high-performance computing capabilities?

- a) Windows
- b) macOS
- c) Linux
- d) Amoeba

85. What is the role of a distributed operating system in resource management?

- a) Ensuring data security and encryption
- b) Managing computer hardware and peripheral devices
- c) Coordinating and allocating resources among networked computers
- d) Providing a user-friendly interface

86. Which communication model is commonly used in distributed operating systems to enable inter-process communication across networked computers?

- a) Message passing
- b) Shared memory
- c) Remote procedure call (RPC)
- d) Socket programming

87. Which of the following statements is true about UNIX?

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

- a) UNIX is a graphical operating system.
- b) UNIX was developed by Microsoft.
- c) UNIX is known for its multi-user and multi-tasking capabilities.
- d) UNIX is primarily used on personal computers.

88. Which organization is responsible for the development and maintenance of the original UNIX operating system?
- a) Microsoft Corporation
 - b) Apple Inc.
 - c) The Linux Foundation
 - d) AT&T Bell Labs

89. What is the shell in the UNIX operating system?
- a) The graphical user interface (GUI)
 - b) The hardware layer
 - c) The command-line interpreter
 - d) The file system manager

90. Which of the following is not a feature of the UNIX operating system?
- a) Hierarchical file system
 - b) Multi-tasking and process management
 - c) Graphical user interface (GUI)
 - d) Networking and inter-process communication

91. Which command is commonly used in UNIX to display the contents of a file?

- a) copy
- b) delete
- c) edit
- d) cat

92. Which popular derivative of UNIX is known for its open-source nature and widespread usage in servers and embedded systems?

- a) macOS
- b) Windows
- c) Linux
- d) FreeBSD

93. What is the kernel in an operating system?
- a) The graphical user interface (GUI)
 - b) The hardware layer
 - c) The core component that manages system resources
 - d) The file system manager

94. Which of the following is a responsibility of the kernel?
- a) Managing user applications
 - b) Allocating memory and CPU resources
 - c) Providing a user-friendly interface
 - d) Controlling network connectivity

95. Which of the following statements is true about the kernel?
- a) The kernel is a separate program that runs on top of the operating system.
 - b) The kernel is responsible for managing peripheral devices.

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

c) The kernel is loaded into memory when the computer boots up.

d) The kernel is primarily responsible for executing user applications.

96. Which type of kernel provides direct access to the hardware and runs in privileged mode?

- a) Microkernel
- b) Monolithic kernel
- c) Hybrid kernel
- d) Exokernel

97. What is the role of the kernel scheduler?

- a) Managing file systems and directories
- b) Interpreting user commands and executing programs
- c) Allocating CPU time to different processes
- d) Handling input/output operations

98. Which type of kernel design provides flexibility and modularity by moving non-essential components out of the kernel space?

- a) Microkernel
- b) Monolithic kernel
- c) Hybrid kernel
- d) Exokernel

99. Which type of file in the UNIX system contains executable code?

- a) Regular file
- b) Directory file

c) Device file

d) Symbolic link file

100. Which type of file in the UNIX system represents a directory or a folder?

- a) Regular file
- b) Directory file
- c) Device file
- d) Symbolic link file

101. Which type of file in the UNIX system represents a hardware device or a peripheral?

- a) Regular file
- b) Directory file
- c) Device file
- d) Symbolic link file

102. Which type of file in the UNIX system is used for creating shortcuts or references to other files?

- a) Regular file
- b) Directory file
- c) Device file
- d) Symbolic link file

103. Which type of file in the UNIX system represents a special file used for inter-process communication?

- a) Regular file
- b) Directory file
- c) Device file
- d) Symbolic link file

104. Which command in the UNIX system is used to identify the type of a file?

- a) ls

105. What does MS-DOS stand for?
a) Microsoft Data Operating System
b) Micro System Disk Operating System
c) Microsoft Disk Operating System
d) Multiple System Disk Operating System
106. Which company developed MS-DOS?
a) Apple Inc.
b) Microsoft Corporation
c) IBM
d) Hewlett-Packard (HP)
107. What is the primary function of MS-DOS?
a) Providing a graphical user interface (GUI)
b) Managing computer hardware resources
c) Running applications and programs
d) Connecting to the internet
108. Which command is used in MS-DOS to display the contents of a directory?
a) DIR
b) CD
c) COPY
d) FORMAT
109. Which file extension is commonly used for batch files in MS-DOS?
a) .bat
b) .exe
c) .doc
d) .txt
110. What is the maximum file size supported by MS-DOS?
a) 64 KB
b) 2 GB
c) 4 GB
d) 16 TB

SUNRISE CLASSES

input/output devices without conflicts.

4. The correct answer is d) Web-based operating systems are a relatively new concept and are not commonly categorized as a traditional type of operating system. Examples of traditional types include single-user, multi-user, and real-time operating systems.

Explanation

1. The correct answer is c) An operating system is a software program that acts as an intermediary between the user and the computer hardware. It manages various hardware and software resources of the computer, such as memory, processors, input/output devices, and file systems.

2. The correct answer is c) Microsoft Office is a suite of productivity applications, including software like Word, Excel, and PowerPoint. It is not an operating system but runs on various operating systems like Windows and macOS.

3. The correct answer is b) The primary purpose of an operating system is to manage and allocate computer resources efficiently. It ensures that different programs and users can share resources like memory, CPU time, and

5. The correct answer is a) Round-robin scheduling is a widely used algorithm in operating systems. It assigns a fixed time slice to each process in a cyclic manner, ensuring fair and equitable CPU time distribution among active processes.

6. The correct answer is c) Virtual memory is a technique used by operating systems to allow processes to execute even when they do not entirely fit in physical memory. It uses a combination of RAM and disk space to create an illusion of having more memory than actually available.

7. The correct answer is c) The file system is responsible for managing and organizing files and directories on storage devices such as hard

SUNRISE CLASSES

drives and solid-state drives. It provides the structure and methods to store, retrieve, and organize data on the storage media.

8. The correct answer is b) Ubuntu Server is an example of a multi-user operating system. It is a Linux-based operating system that is designed to be used as a server and can support multiple simultaneous user sessions.

9. The correct answer is b) Device drivers are software components that allow the operating system to communicate and interact with hardware devices connected to the computer. They provide an interface for the operating system to control and manage the functionalities of devices like printers, keyboards, and network adapters.

10. The correct answer is d) QNX is an example of a real-time operating system. Real-time operating systems are designed to handle tasks with specific timing constraints, where meeting deadlines is crucial. They are commonly used in embedded systems, industrial control systems, and other time-sensitive applications.

11. The correct answer is d) The primary function of an operating system is to manage computer resources such as memory, CPU, and storage.

12. The correct answer is c) Memory management involves allocating and deallocating memory for processes, ensuring efficient utilization of memory resources.

13. The correct answer is c) File management is responsible for managing and organizing files and directories on storage devices.

14. The correct answer is c) Process management involves managing and scheduling processes, allocating system resources to them and ensuring their efficient execution.

15. The correct answer is b) Device driver management is responsible for managing and controlling input/output devices by providing the necessary software interface.

16. The correct answer is c) Device driver management is responsible for managing and controlling peripheral devices connected to the system.

17. The correct answer is d) The security and access control function ensures system integrity, protects against unauthorized access, and manages user authentication and authorization.

18. The correct answer is d) The scheduling function determines the execution order of processes and manages the allocation of system resources.

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

19. The correct answer is d) The I/O management function manages and coordinates input/output operations between devices and the main memory.

20. The correct answer is a) Virtualization allows the creation of multiple virtual environments or instances, enabling the simultaneous execution of multiple operating systems or applications.

21. The correct answer is d) The memory manager component is responsible for managing memory resources, such as allocating and deallocating memory for processes.

22. The correct answer is d) The kernel is the core component of an operating system responsible for managing system resources, including memory, CPU, and input/output devices.

23. The correct answer is d) Device drivers are responsible for managing and controlling hardware devices, providing the necessary software interface for the operating system to communicate with them.

24. The correct answer is c) The shell component provides the user interface for interacting with the operating system, whether through a command-line interface or a graphical user interface.

25. The correct answer is c) The file system component manages file

storage and organization, including creating, reading, writing, and deleting files and directories.

26. The correct answer is b) Device drivers are responsible for managing and controlling input/output devices such as printers, keyboards, and network adapters.

27. The correct answer is c) The process manager component manages and schedules processes, allocating system resources and controlling their execution.

28. The correct answer is c) The user interface component allows users to interact with the operating system, executing commands or operations and providing a means for communication.

29. The correct answer is b) The kernel component handles user requests, manages system resources, and controls the execution of processes and hardware devices.

30. The correct answer is d) The file system component manages the storage and organization of files, including their creation, deletion, and retrieval.

31. The correct answer is a) MS-DOS (Microsoft Disk Operating System) was the first commercially successful microcomputer operating

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

system, released by Microsoft in 1981.

32. The correct answer is a) MS-DOS also served as the primary operating system for IBM-compatible personal computers in the early days of the PC industry.

33. The correct answer is b) UNIX, developed at Bell Labs in the 1970s, became widely used in academic and research environments and had a significant impact on the development of operating systems.

34. The correct answer is c) Windows was the first operating system to introduce a graphical user interface (GUI) for personal computers with the release of Windows 1.0 in 1985.

35. The correct answer is d) Mac OS, developed by Apple Inc., was introduced in 1984 with the release of the original Macintosh computer.

36. The correct answer is c) Windows 95, released in 1995, brought significant improvements in user-friendliness, multimedia capabilities, and stability for Microsoft's operating system.

37. The correct answer is d) Mac OS X, introduced by Apple Inc. in 2001, had a Unix-based architecture and aimed to combine the power of Unix with a user-friendly interface for both desktop and mobile devices.

38. The correct answer is c) Windows XP, released by Microsoft in 2001, brought improvements in stability, performance, and a redesigned user interface compared to its predecessor, Windows 2000.

39. The correct answer is c) Windows 7, released by Microsoft in 2009, aimed to address the shortcomings of Windows Vista and introduced several performance and security enhancements.

40. The correct answer is c) Windows 10, released by Microsoft in 2015, introduced a range of new features and provided a unified platform for various devices, including PCs, tablets, and smartphones.

41. The correct answer is c) GM-NAA I/O (General Motors-North American Aviation Input/Output) was an operating system developed for the first generation of computers, specifically the UNIVAC and ENIAC systems.

42. The correct answer is b) The Fortran Monitor System (FMS) introduced the concept of batch processing, where multiple jobs are executed without user intervention, and it was used on the IBM 704 computer.

43. The correct answer is c) CTSS (Compatible Time-Sharing System) was developed in the second generation and provided improved

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

support for programming languages and introduced timesharing, allowing multiple users to share a computer simultaneously.

44. The correct answer is a) IBM OS/360 was designed for the IBM System/360 mainframe computers and became one of the most widely used operating systems of its time, offering a wide range of capabilities and services.

45. The correct answer is a) UNIX, developed in the third generation, introduced the concept of virtual memory, multitasking, and file management. It became popular among universities and research institutions and had a significant impact on the development of operating systems.

46. The correct answer is a) UNIX, developed by Bell Labs, became popular among universities, research institutions, and later influenced the development of various Unix-like systems, including Linux and macOS.

47. The correct answer is b) Windows, developed in the fourth generation, introduced a user-friendly graphical user interface (GUI) and became a dominant operating system for personal computers, providing a wide range of applications and software compatibility.

48. The correct answer is c) Mac OS, developed by Apple Inc., became known for its innovative design, ease of use, and integration with Apple's hardware, offering a seamless user experience for Macintosh computers.

49. The correct answer is d) Windows NT was developed by Microsoft as a successor to MS-DOS, providing a more advanced and stable platform for the Windows operating system family.

50. The correct answer is b) Windows 3.1 was the first operating system to introduce a multitasking graphical user interface (GUI), bringing a user-friendly experience to personal computers and playing a significant role in the popularization of PCs.

51. The correct answer is c) Batch processing operating systems execute jobs sequentially without user intervention, allowing a series of jobs to be processed in a programmed order.

52. The correct answer is c) In a batch processing system, jobs are typically executed one after another, without user interaction or real-time processing.

53. The correct answer is d) The job scheduler is a component of a batch processing operating system responsible for scheduling and managing the execution of jobs,

SUNRISE CLASSES

deciding the order and priority of job execution.

54. The correct answer is d) The role of the job scheduler is to determine the order and priority of job execution, ensuring efficient utilization of system resources.

55. The correct answer is c) IBM OS/360 is considered one of the earliest examples of a batch processing operating system, developed for IBM mainframe computers.

56. The correct answer is b) In a batch processing system, once one job completes its execution, the next job is automatically selected and executed by the system without requiring manual intervention.

1. a) Maximizing CPU utilization
2. c) Improved system performance
3. a) Process
4. c) Round-robin scheduling
5. b) Saving and restoring process state
6. c) UNIX

57. The correct answer is a) The primary goal of a multiprogramming operating system is to maximize CPU utilization by keeping the CPU busy with executing multiple processes concurrently.

58. The correct answer is c) The main advantage of a

multiprogramming operating system is improved system performance, as it allows for efficient utilization of system resources by executing multiple programs simultaneously.

59. The correct answer is a) In a multiprogramming operating system, a process refers to a small unit of work that can be scheduled for execution. It includes the program code, data, and resources required to execute the program.

60. The correct answer is c) Round-robin scheduling is a mechanism used in a multiprogramming operating system to allocate CPU time among multiple processes. Each process is assigned a fixed time slice, and they take turns executing in a circular manner.

61. The correct answer is b) Context switching is the process of saving the current state of a process and restoring the saved state of another process. It allows the multiprogramming operating system to switch between executing processes efficiently.

62. The correct answer is c) UNIX is an example of a multiprogramming operating system that introduced the concept of time-sharing, allowing multiple users to simultaneously interact with the system through terminals.

SUNRISE CLASSES

63. The correct answer is a) The primary goal of a time-sharing operating system is to maximize CPU utilization by allowing multiple users or processes to share the CPU in a time-sliced manner.

64. The correct answer is c) The main advantage of a time-sharing operating system is improved system performance, as it allows for efficient utilization of system resources by enabling multiple users or processes to run concurrently.

65. The correct answer is a) In a time-sharing operating system, a process refers to a small unit of work that can be scheduled for execution. It includes the program code, data, and resources required to execute the program.

66. The correct answer is a) Time slicing is a mechanism used in a time-sharing operating system to allocate CPU time among multiple users or processes. Each user or process is assigned a fixed time slice before switching to the next.

67. The correct answer is b) Context switching is the process of saving the current state of a process and restoring the saved state of another process. It allows the time-sharing operating system to switch between executing processes efficiently.

68. The correct answer is c) UNIX is widely regarded as one of the first successful time-sharing operating

systems, as it introduced the concept of time-sharing and allowed multiple users to simultaneously interact with the system through terminals.

69. The correct answer is c) The primary characteristic of a real-time operating system (RTOS) is prioritizing real-time processing, ensuring that tasks meet their timing requirements and deadlines.

70. The correct answer is c) The main purpose of a real-time operating system is to enable real-time task scheduling and execution, allowing tasks to meet their timing constraints.

71. The correct answer is a) In a real-time operating system, periodic tasks have strict timing requirements and deadlines, often recurring at regular intervals.

72. The correct answer is c) Earliest Deadline First (EDF) scheduling is a commonly used scheduling algorithm in real-time operating systems to ensure that tasks with the earliest deadlines are executed first.

73. The correct answer is a) The main difference between hard real-time and soft real-time operating systems is that hard real-time systems have stricter timing constraints than soft real-time systems. Hard real-time systems must meet their deadlines, while

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

soft real-time systems provide more flexibility in meeting timing requirements.

74. The correct answer is d)

VxWorks is an example of a real-time operating system commonly used in embedded systems, providing deterministic and reliable real-time capabilities.

75. The correct answer is b) The primary purpose of a network operating system (NOS) is to enable network connectivity and resource sharing, allowing devices to communicate and share files, printers, and other resources.

76. The correct answer is b) In a client-server network operating system, network resources are centrally managed and controlled by dedicated servers, providing a hierarchical structure where clients request services from the server.

77. The correct answer is c) The network operating system plays a role in controlling access to shared files and printers, managing permissions, and ensuring secure and efficient file and print sharing across the network.

78. The correct answer is a) Windows Server is a widely used network operating system in business environments, offering features such as directory services, centralized administration, and

seamless integration with Windows client systems.

79. The correct answer is d) A network file system (NFS) in a network operating system enables file sharing and access across different platforms, allowing clients to access remote files as if they were local.

80. The correct answer is d) Secure Shell (SSH) is a commonly used network operating system protocol for remote administration and secure file transfers, providing encrypted communication and authentication between networked devices.

81. The correct answer is c) The primary goal of a distributed operating system (DOS) is to enable communication and resource sharing among networked computers, allowing them to work together as a unified system.

82. The correct answer is d) A characteristic of a distributed operating system is that computers work together as a unified system, sharing resources and collaborating to perform tasks.

83. The correct answer is d) In a distributed operating system, a distributed file system (DFS) enables file sharing and access across multiple computers, providing a unified view of the files and directories in the network.
