SERVICE, TRUST & RESULT

SUNRISE CLASSES

- b) Byte
c) Kilobyte
d) Megabyte
85. How many bits are there in a byte?
a) 4 bits
b) 8 bits
c) 16 bits
d) 32 bits
86. What is the maximum capacity of memory measured in?
a) Bits
b) Bytes
c) Kilobytes
d) Gigabytes
87. How many bytes are in a kilobyte (KB)?
a) 1024 bytes
b) 1000 bytes
c) 512 bytes
d) 2048 bytes
88. What is the next unit of memory after a gigabyte (GB)?
a) Terabyte (TB)
b) Megabyte (MB)
c) Kilobyte (KB)
d) Petabyte (PB)
89. Which term refers to the number of bits a CPU can manipulate at one time?
a) Word size
b) Byte size
c) Register size
d) Circuit size
90. What is the word size of a 32-bit processor?
a) 16 bits
b) 32 bits
c) 64 bits
d) 128 bits
91. What does a 32-bit processor mean?
a) It has 32-bit secondary memory.
b) It can process 32 bits of data at a time.
c) It has 32-bit registers in the ALU.
d) It can store 32 bits of data in cache memory.
92. Which factor contributes to increased computer performance?
a) Larger secondary memory capacity
b) Faster access time in primary memory
c) Smaller word size in the CPU
d) Larger word size in the CPU
93. What is the purpose of registers in the ALU?
a) To store instructions and data permanently
b) To control memory operations
c) To manipulate data during processing
d) To access secondary memory directly
94. Which unit of memory is non-volatile in nature?

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

- a) Secondary memory
b) Cache memory
c) Primary memory
d) Flip-flops memory
95. Which memory operation allows for data copying?
a) Read operation
b) Write operation
c) Copy operation
d) Delete operation
96. What is the purpose of the interface circuit in memory?
a) To control memory operations
b) To logically access data from the memory
c) To store data permanently
d) To increase the word size of the CPU
97. What is the smallest block of memory?
a) Bit
b) Byte
c) Kilobyte
d) Megabyte
98. What is the purpose of secondary storage?
a) To store data temporarily during program execution
b) To provide fast access to frequently used data
c) To store data for long periods of time
d) To control and synchronize memory operations
99. Which unit is used to express the memory capacity of a computer system?
a) Bit
b) Byte
c) Kilobyte
d) Hertz
100. What is the purpose of cache memory?
a) To store frequently accessed data
b) To provide non-volatile storage
c) To increase the word size of the CPU
d) To control memory operations
101. Which type of memory is directly accessed by the processor during program execution?
a) Secondary memory
b) Cache memory
c) Primary memory
d) Flip-flops memory
102. What is the main characteristic of secondary memory?
a) Large capacity and fast access time
b) Volatile storage and high cost
c) Non-volatile storage and low cost
d) Small capacity and fast access time
103. Which memory operation retrieves data from memory?
a) Copy
b) Read
c) Write

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

- d) Delete
104. What is the smallest unit of memory?
- Bit
 - Byte
 - Kilobyte
 - Megabyte
105. What is the purpose of cache memory in a computer system?
- To provide permanent storage for data
 - To increase the capacity of primary memory
 - To speed up data access by storing frequently used data
 - To synchronize memory operations
106. How is the memory capacity typically expressed?
- Megahertz (MHz)
 - Gigabytes (GB)
 - Clock cycles
 - Binary digits (bits)
107. Which memory is volatile in nature?
- Primary memory
 - Secondary memory
 - Cache memory
 - Register memory
108. What is the purpose of the interface circuit in memory?
- To control memory operations
 - To store data permanently
 - To increase the word size of the CPU
 - To logically access data from the memory
109. Which unit is used to express the memory capacity of a computer system?
- Hertz (Hz)
 - Byte
 - Kilobyte (KB)
 - Petabyte (PB)
110. What is the word size of a 64-bit processor?
- 8 bits
 - 16 bits
 - 32 bits
 - 64 bits
111. Which of the following is true about the memory hierarchy in a computer system?
- It consists of only primary memory.
 - It consists of primary memory and cache memory.
 - It consists of primary memory, cache memory, and secondary memory.
 - It consists of primary memory, cache memory, secondary memory, and virtual memory.
112. Which level of the memory hierarchy has the fastest access time?
- Primary memory
 - Cache memory
 - Secondary memory

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

d) Virtual memory

113. What is the main purpose of the memory hierarchy in a computer system?

- a) To increase the storage capacity of the system.
- b) To reduce the overall cost of the system.
- c) To improve the performance of memory access.
- d) To provide backup storage for data.

114. Which type of memory is closest to the CPU in the memory hierarchy?

- a) Primary memory
- b) Cache memory
- c) Secondary memory
- d) Virtual memory

115. Which of the following is a characteristic of cache memory?

- a) Large capacity and low cost
- b) Slow access time and non-volatile storage
- c) Small capacity and fast access time
- d) Non-volatile storage and high cost

116. Which memory level is typically made up of solid-state drives (SSDs) or hard disk drives (HDDs)?

- a) Primary memory
- b) Cache memory
- c) Secondary memory
- d) Virtual memory

117. What is the role of virtual memory in the memory hierarchy?

- a) To provide additional storage capacity beyond the physical memory.
- b) To store frequently accessed data for fast access.
- c) To provide a temporary storage area for data during processing.
- d) To store instructions and data permanently.

118. Which level of the memory hierarchy has the largest storage capacity?

- a) Primary memory
- b) Cache memory
- c) Secondary memory
- d) Virtual memory

119. Which memory level has the highest cost per byte of storage?

- a) Primary memory
- b) Cache memory
- c) Secondary memory
- d) Virtual memory

120. How is data transferred between different levels of the memory hierarchy?

- a) Directly between any two levels
- b) Only from lower levels to higher levels
- c) Only from higher levels to lower levels

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

d) Through a controlled movement based on data usage patterns

121. What is the main function of the interface unit in a computer system?

- a) Connect the CPU to the power supply
- b) Interconnect the CPU with memory and I/O devices
- c) Control the flow of data within the CPU
- d) Manage the cooling system of the computer

122. Which type of bus is responsible for carrying actual data between components?

- a) Data bus
- b) Address bus
- c) Control bus
- d) Expansion bus

123. What type of information does the control bus carry?

- a) Actual data
- b) Memory addresses
- c) Control signals and status information
- d) Device-specific formatting information

124. What is the role of a device controller?

- a) Connect devices directly to the internal bus
- b) Coordinate the activities of specific peripherals

c) Provide power supply to the devices

d) Convert data between analog and digital formats

125. How does the processor interact with input and output devices?

- a) Through the address bus
- b) By directly connecting to the internal bus
- c) Via the device controllers
- d) By using the control bus exclusively

126. What is the purpose of assigning addresses to input/output devices?

- a) To establish physical connections between devices
- b) To enable the devices to communicate with each other
- c) To provide a unique identifier for each device
- d) To control the power supply to the devices

127. What is the function of the motherboard in a computer system?

- a) Connect the computer to the internet
- b) Store data and instructions permanently
- c) Provide physical connections among components
- d) Control the execution of computer programs

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

128. Which component is responsible for mounting and connecting all the computer system's components?

- a) Power supply unit
- b) Central processing unit
- c) Interface unit
- d) Motherboard

129. What is the alternative name for the motherboard?

- a) Main board
- b) Processor unit
- c) Control unit
- d) Expansion board

130. Which component on the motherboard is responsible for controlling the flow of electricity to different parts of the computer?

- a) Central processing unit
- b) Random access memory
- c) Power supply unit
- d) Interface unit

131. Which bus type is responsible for connecting expansion cards to the motherboard?

- a) Data bus
- b) Address bus
- c) Control bus
- d) Expansion bus

132. What is the primary purpose of the expansion bus?

- a) Carry control signals between the CPU and peripherals
- b) Transfer data between the CPU and main memory

c) Connect the CPU to input/output devices

d) Provide a way to connect additional components to the motherboard

133. Which component is responsible for managing the cooling system of the computer?

- a) Interface unit
- b) Power supply unit
- c) Central processing unit
- d) Motherboard

134. Which bus type carries memory addresses?

- a) Data bus
- b) Address bus
- c) Control bus
- d) Expansion bus

135. What is the purpose of the control signals carried by the control bus?

- a) Report the status of various devices
- b) Carry actual data between components
- c) Provide power to the devices
- d) Convert analog signals to digital signals

136. How are devices connected to the computer's internal bus?

- a) Through the device controllers
- b) By direct physical connections
- c) Using wireless technology
- d) Via the address bus

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

137. What is the purpose of the power supply unit in a computer system?

- a) Connect the CPU to the motherboard
- b) Store data and instructions temporarily
- c) Provide power to all components of the computer
- d) Control the flow of data within the CPU

138. Which component on the motherboard is responsible for temporarily storing data and instructions during processing?

- a) Power supply unit
- b) Central processing unit
- c) Random access memory
- d) Interface unit

139. What is the advantage of using a motherboard in a computer system?

- a) It increases the processing speed of the CPU
- b) It provides additional storage capacity
- c) It allows easy connection and integration of components
- d) It reduces the power consumption of the computer

140. How does the motherboard facilitate the communication between the CPU and memory?

- a) Through the control bus
- b) By directly connecting the CPU to memory modules

- c) Via the expansion bus
- d) By providing physical connections and buses

141. What is the function of the motherboard in a computer system?

- a) Store data and instructions
- b) Control the flow of electricity
- c) Connect all hardware components
- d) Manage the cooling system

142. Which component is NOT typically found on a motherboard?

- a) Central processing unit (CPU)
- b) Random access memory (RAM)
- c) Power supply unit (PSU)
- d) Graphics processing unit (GPU)

143. The motherboard connects to the CPU using:

- a) Expansion slots
- b) USB ports
- c) SATA connectors
- d) CPU sockets

144. The main circuitry on a motherboard is usually made up of:

- a) Transistors
- b) Capacitors
- c) Integrated circuits (ICs)
- d) Resistors

145. Which bus is responsible for connecting expansion cards to the motherboard?

- a) Data bus
- b) Address bus
- c) Control bus

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

d) Expansion bus

146. What does the BIOS (Basic Input/Output System) on the motherboard do?

- a) Control the power supply unit
- b) Manage the cooling system
- c) Initialize the hardware and start the operating system
- d) Connect the motherboard to the CPU

147. The form factor of a motherboard refers to:

- a) Its physical size and shape
- b) The number of expansion slots
- c) The brand and model of the motherboard
- d) The type of CPU socket it supports

148. Which component is responsible for storing the CMOS settings on the motherboard?

- a) Northbridge
- b) Southbridge
- c) BIOS chip
- d) Clock generator

149. The chipset on a motherboard consists of:

- a) RAM slots and connectors
- b) CPU and GPU
- c) Northbridge and Southbridge
- d) USB and Ethernet ports

150. Overclocking refers to:

- a) Upgrading the BIOS firmware

b) Increasing the clock speed of the CPU

c) Adding more RAM to the motherboard

d) Connecting multiple hard drives in a RAID configuration

151. Which of the following is an example of system software?

- a) Word processing program
- b) Web browser
- c) Operating system
- d) Spreadsheet application

152. What is the purpose of an operating system?

- a) Run applications
- b) Manage hardware resources
- c) Create documents
- d) Connect to the internet

153. Which type of software allows users to perform specific tasks or applications?

- a) System software
- b) Application software
- c) Utility software
- d) Firmware

154. Which of the following is an example of application software?

- a) Device driver
- b) Antivirus program
- c) Web browser
- d) Disk defragmenter

155. Which programming language is widely used for developing web applications?

- a) C++

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

- b) Java
c) Python
d) HTML
156. Which software allows users to create and edit documents, spreadsheets, and presentations?
a) Web browser
b) Operating system
c) Office suite
d) Media player
157. Which software is designed to protect against malicious software and threats?
a) Firewall
b) Antivirus software
c) File compression software
d) Disk cleanup utility
158. Which software is used to manage and organize databases?
a) Spreadsheet application
b) Database management system
c) Graphics editing software
d) Video editing software
159. Which software allows users to browse and access websites on the internet?
a) Antivirus program
b) Media player
c) Web browser
d) Email client
160. Which type of software helps optimize and improve the performance of a computer?
a) Operating system
b) Utility software
c) Application software
d) Firmware
161. Which type of memory is used as primary memory in modern computers?
a) Hard disk drive (HDD)
b) Flash memory
c) Semiconductor memory
d) Magnetic tape
162. What does "random access" mean in the context of memory?
a) Accessing memory randomly without a specific order
b) Reading data from memory only
c) Writing data to memory only
d) Accessing any storage location directly for both read and write operations
163. Which type of memory is faster, cheaper, and provides more storage space in lesser physical area?
a) Magnetic memory
b) Optical memory
c) Semiconductor memory
d) Magnetic tape memory
164. What is the main drawback of semiconductor memory?
a) Volatility
b) Slowness
c) Expensiveness
d) Limited storage capacity

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

165. Which type of memory holds the data and instructions waiting to be processed by the processor?

- a) ROM (Read-Only Memory)
- b) Cache memory
- c) RAM (Random Access Memory)
- d) Virtual memory

166. What are the two types of RAM used in computer systems?

- a) Dynamic RAM (DRAM) and Static RAM (SRAM)
- b) Synchronous RAM (SRAM) and Asynchronous RAM (ARAM)
- c) Volatile RAM and Non-volatile RAM
- d) Primary RAM and Secondary RAM

167. Which type of RAM requires refreshing circuits to retain its content?

- a) Dynamic RAM (DRAM)
- b) Static RAM (SRAM)
- c) Synchronous RAM (SRAM)
- d) Double Data Rate RAM (DDR RAM)

168. How does Dynamic RAM (DRAM) store data?

- a) Using transistors
- b) Using capacitors
- c) Using flip flop circuits
- d) Using junction capacitors

169. Which type of RAM is typically used as processor caches and I/O buffers?

- a) SDRAM (Synchronous Dynamic RAM)
- b) RDRAM (Rambus Dynamic RAM)
- c) DDR RAM (Double Data Rate RAM)
- d) SRAM (Static RAM)

170. Which type of RAM gives faster performance by transmitting data on both rising and falling edges of each clock pulse?

- a) SDRAM (Synchronous Dynamic RAM)
- b) RDRAM (Rambus Dynamic RAM)
- c) DDR RAM (Double Data Rate RAM)
- d) SRAM (Static RAM)

171. What is the purpose of Video RAM (VRAM)?

- a) Store image data for the visual display monitor
- b) Act as a data storage buffer between the processor and the visual display unit
- c) Store operating system instructions
- d) Hold data and instructions waiting to be processed by the processor

172. Which company developed RDRAM (Rambus Dynamic RAM)?

- a) Intel Corporation
- b) AMD (Advanced Micro Devices)
- c) Microsoft Corporation
- d) Rambus Corporation

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

173. Which type of RAM is considered the most expensive?
- SDRAM (Synchronous Dynamic RAM)
 - RDRAM (Rambus Dynamic RAM)
 - DDR RAM (Double Data Rate RAM)
 - SRAM (Static RAM)
174. Which type of RAM is preferred for high-performance personal computers?
- SDRAM (Synchronous Dynamic RAM)
 - RDRAM (Rambus Dynamic RAM)
 - DDR RAM (Double Data Rate RAM)
 - SRAM (Static RAM)
175. What does DDR stand for in DDR RAM?
- Double Dynamic RAM
 - Dual Data Rate
 - Dynamic Data RAM
 - Digital Data Rate
176. What is the purpose of VRAM in a computer system?
- Store video games
 - Enhance the processing speed of the CPU
 - Buffer transmission information in networking devices
 - Store image data for the visual display monitor
177. Which type of memory is volatile in nature?
- Magnetic memory
 - Optical memory
 - Semiconductor memory
 - Magnetic tape memory
178. Which type of memory is non-volatile and retains its contents even when the power is switched off?
- Cache memory
 - Virtual memory
 - Secondary memory
 - ROM (Read-Only Memory)
179. What is the purpose of the cache memory in a computer system?
- Store frequently accessed data for faster retrieval
 - Store operating system instructions
 - Act as a buffer for transmission information
 - Store image data for the visual display monitor
180. What is the function of ROM (Read-Only Memory) in a computer system?
- Store data and instructions
 - Control the flow of electricity
 - Connect all hardware components
 - Hold permanent instructions and data that cannot be modified

SUNRISE CLASSES

181. Which of the following is not a main type of secondary storage device?

- a) RAM
- b) Disk drives
- c) Tape drives
- d) USB flash drives

182. What is the purpose of secondary storage devices?

- a) To store temporary data
- b) To store data permanently
- c) To process data
- d) To provide fast access to data

183. Which secondary storage device is known for its faster performance and larger capacity?

- a) Hard disk
- b) Floppy disk
- c) CD drive
- d) Tape drive

184. What is the main disadvantage of floppy disks compared to hard disks?

- a) Slower performance
- b) Smaller capacity
- c) Non-removability
- d) Higher cost

185. CD-ROM stands for:

- a) Compact Disk-Read Only Memory
- b) Compact Disk-Random Access Memory
- c) Compact Disk-Recordable Only Memory
- d) Compact Disk-ReWritable Optical Memory

186. Which component of a floppy disk drive rotates the disk media?

- a) Read/write head
- b) Motor
- c) Spindle
- d) Arm

187. The tracks on a hard disk are divided into:

- a) Sectors
- b) Cylinders
- c) Platters
- d) Tracks

188. The data storage capacity of a hard disk is typically measured in:

- a) Megabytes (MB)
- b) Kilobytes (KB)
- c) Gigabytes (GB)
- d) Terabytes (TB)

189. What type of memory is a CD-ROM?

- a) Read-only memory
- b) Random-access memory
- c) Read-write memory
- d) Volatile memory

190. Which secondary storage device provides the highest data transfer rates?

- a) Hard disk
- b) Floppy disk
- c) Tape drive
- d) USB flash drive

191. The read/write heads of a hard disk move radially across the:

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

- a) Platter surfaces
- b) Spindle
- c) Tracks
- d) Cylinders

- a) Hard disk
- b) Floppy disk
- c) CD drive
- d) Tape drive

192. What is the purpose of the metal arms in a hard disk drive?

- a) To rotate the platters
- b) To protect the platters
- c) To position the read/write heads
- d) To create magnetic marks on the platters

197. Which component of a floppy disk drive moves the read/write heads forward and backward?

- a) Spindle
- b) Arm
- c) Motor
- d) Platter

193. Which of the following is a removable secondary storage medium?

- a) Hard disk
- b) Floppy disk
- c) CD-ROM
- d) USB flash drive

198. The storage capacity of a floppy disk commonly used in personal computers is:

- a) 1.44 MB
- b) 512 KB
- c) 5.25 GB
- d) 1 TB

194. Which secondary storage device is commonly used for backup and archival purposes?

- a) Hard disk
- b) Floppy disk
- c) CD drive
- d) Tape drive

199. What technology are most drives used for secondary memory based on?

- a) Electro-mechanical
- b) Solid-state
- c) Optical
- d) Magnetic

195. What is the main advantage of a hard disk over other storage devices?

- a) Faster access time
- b) Lower cost
- c) Higher portability
- d) Smaller physical size

200. Which secondary storage device provides better reliability of operation?

- a) Hard disk
- b) Floppy disk
- c) CD drive
- d) Tape drive

196. Which secondary storage device uses magnetic tapes?

201. What does CD-RW stand for?

- a) Compact Disc-Read Only Memory
- b) Compact Disc-ReWritable

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

- c) Compact Disc-Recordable
- d) Compact Disc-Rewindable

202. Which of the following is a feature of CD-RW discs?

- a) They can be erased and reused.
- b) Once burned, data cannot be changed.
- c) They have a larger storage capacity.
- d) They are made of synthetic resin.

203. How are microscopic pits created on the surface of a CD?

- a) By a laser diode
- b) By infrared heat
- c) By a low-intensity laser beam
- d) By a reflective material

204. What type of laser beam is used to read the bits on a CD-ROM?

- a) High-intensity laser beam
- b) Infrared laser beam
- c) Low-intensity laser beam
- d) Ultraviolet laser beam

205. What determines whether a bit on a CD is a 1 or a 0?

- a) The reflective material
- b) The synthetic resin
- c) The presence of pits and dumps
- d) The sensor receiving the reflection

206. What is the primary use of CDs originally?

- a) General computer storage
- b) Data backup and archival
- c) Music storage

- d) Video storage

207. What is the difference between CD-R and CD-RW?

- a) CD-RW has a larger storage capacity.
- b) CD-R can be erased and reused.
- c) CD-RW can't be changed once burned.
- d) CD-RW is made of synthetic resin.

208. What technology is used to write data on a CD?

- a) Infrared heat
- b) Laser diode
- c) Reflective material
- d) Synthetic resin

209. What is the purpose of pits and dumps on a CD surface?

- a) To simulate amorphous and crystalline states
- b) To reflect laser beam weakly
- c) To code information in the form of ups and downs
- d) To create a smooth area on the disc

210. What is the function of the sensor in CD reading?

- a) To determine whether a bit is a 1 or a 0
- b) To create microscopic pits on the CD
- c) To erase and reuse the CD-RW disc
- d) To code information on the CD surface

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

211. Which type of CD drive is commonly found in personal computers?

- a) CD-ROM drive
- b) CD-R drive
- c) CD-RW drive
- d) CD-Writer drive

212. What happens when a CD-R is "burned"?

- a) The disc becomes amorphous and non-reflective.
- b) The disc can be erased and reused.
- c) The disc's synthetic resin is coated with a reflective material.
- d) The data stored on the disc cannot be changed.

213. What allows a CD to store and play music?

- a) Reflective material
- b) Synthetic resin
- c) Laser diode
- d) Microscopic pits on the surface

214. What enables a CD to be read by a CD-ROM drive?

- a) The presence of pits and dumps
- b) The reflective material on the disc
- c) The low-intensity laser beam
- d) The synthetic resin coating

215. What is the primary purpose of a CD-Recordable (CD-R) drive?

- a) To erase and reuse CD-RW discs
- b) To create CDs that cannot be changed

c) To read both CD-R and CD-RW discs

d) To simulate pits and flat surfaces on a CD-RW disc

216. How is data written

on a CD-RW?

- a) By creating pits and dumps on the surface
- b) By heating the disc to different temperatures
- c) By coating the surface with synthetic resin
- d) By using a high-intensity laser beam

217. What characteristic allows a CD to reflect laser beam weakly?

- a) Smooth surface
- b) Amorphous state
- c) Crystalline state
- d) Low-intensity laser beam

218. Which component of a CD drive reads the bits on a CD?

- a) Sensor
- b) Laser diode
- c) Reflective material
- d) Infrared heat

219. What property of CD-RW discs allows them to be reused?

- a) Synthetic resin coating
- b) Reflective material
- c) Presence of microscopic pits
- d) Ability to change between amorphous and crystalline states

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

220. What temperature change causes a CD-RW disc to become reflective?

- a) Heating to a low temperature
- b) Cooling to a high temperature
- c) Heating to a high temperature
- d) Cooling to a low temperature

221. Which component of a computer system acts as the manager of system resources?

- a) Processor
- b) Operating system
- c) Main memory
- d) I/O devices

222. What is the primary function of an operating system?

- a) To provide an interface between the user and the hardware
- b) To manage system resources and allocate them to programs
- c) To perform data processing tasks
- d) To provide security for the computer system

223. Which function of an operating system involves managing the execution of programs?

- a) Process management
- b) Memory management
- c) File management
- d) Device management

224. The process abstraction is a fundamental mechanism implemented by the operating system for the management of:

- a) Files
- b) Memory
- c) Input/output devices
- d) Program execution

225. What is the responsibility of memory management in an operating system?

- a) Allocating CPU time to processes
- b) Managing user interfaces
- c) Keeping track of memory usage
- d) Controlling access to files

226. Device management in an operating system involves:

- a) Managing the execution of programs
- b) Allocating memory resources
- c) Controlling and scheduling I/O operations
- d) Organizing files and directories

227. Which function of an operating system is responsible for performing operations on files and organizing them?

- a) Process management
- b) Memory management
- c) File management
- d) Device management

228. What is the purpose of the file system in an operating system?

- a) To allocate memory resources
- b) To manage input/output devices
- c) To control program execution
- d) To perform operations on files

SUNRISE CLASSES

229. The kernel in an operating system is responsible for:
- Interacting with the hardware directly
 - Providing a user-friendly interface
 - Managing file operations
 - Allocating CPU time to processes
230. When a computer boots up, it first goes through:
- File management functions
 - Initialization functions
 - Memory allocation functions
 - User interface functions
231. The user interface of an operating system is the portion that:
- Manages system resources
 - Interacts directly with the hardware
 - Allows users to interact with the system
 - Controls the file operations
232. Which type of operating system interface accepts only typed-in text commands?
- Graphical user interface
 - Command-line interface
 - Web-based interface
 - Menu-driven interface
233. Which operating systems provide users with a graphical user interface?
- MS-DOS and early versions of UNIX
 - Linux and Solaris
 - Mac and MS Windows
 - Windows and Linux
234. The kernel represents only a small portion of the code of the entire operating system but remains in:
- Secondary storage
 - Primary storage
 - External storage
 - Cache memory
235. Which function of an operating system involves controlling the access of programs and processes to resources?
- Process management
 - Memory management
 - File management
 - Resource management
236. Which component of a computer system interacts directly with the hardware?
- User interface
 - Kernel
 - Main memory
 - Secondary storage
237. The primary purpose of an operating system is to:
- Execute programs
 - Provide a user-friendly interface
 - Manage system resources
 - Perform data processing tasks

SUNRISE CLASSES

238. Which function of an operating system involves organizing files hierarchically into directories?
- Process management
 - Memory management
 - File management
 - Device management
239. The operating system is responsible for allocating which of the following resources to processes?
- Memory
 - Input/output devices
 - Processor time
 - All of the above
240. The kernel remains in primary storage while other portions of the operating system may be transferred in and out of:
- Primary storage
 - Secondary storage
 - Cache memory
 - External storage
241. Which function of an operating system involves managing the execution of multiple programs concurrently?
- Process management
 - Memory management
 - File management
 - Device management
242. What is the purpose of resource management in an operating system?
- To provide security for the computer system
 - To manage user interfaces
 - To allocate system resources efficiently
 - To control access to files
243. The file system allows users and programs to perform various operations on files, including:
- Creating, deleting, and modifying files
 - Allocating memory resources
 - Managing input/output devices
 - Controlling program execution
244. Which component of an operating system is responsible for managing the execution of programs and allocating CPU time?
- Scheduler
 - File system
 - Device driver
 - Kernel
245. The user interface of an operating system allows users to interact with the system through:
- Text commands
 - Icons, menus, and mouse movements
 - Graphs and charts
 - Web-based applications
246. Which function of an operating system involves controlling and scheduling accesses to input/output devices?
- Process management

- b) Memory management
c) File management
d) Device management
247. The primary storage used by the kernel of an operating system is typically:
a) Hard disk
b) Solid-state drive
c) Cache memory
d) Random access memory (RAM)
248. Which function of an operating system involves allocating memory to processes and organizing memory usage?
a) Process management
b) Memory management
c) File management
d) Device management
249. What is the main purpose of the kernel in an operating system?
a) To provide a user-friendly interface
b) To manage system resources
c) To control file operations
d) To interact with the hardware directly
250. The user interface and way of interaction with the operating system can vary widely from one operating system to another, such as:
a) MS-DOS and Linux
b) Solaris and Mac
c) MS Windows and Linux
d) UNIX and MS-DOS
251. In some digital devices like small appliances and handheld devices, where is the operating system typically stored?
a) ROM
b) RAM
c) Hard disk
d) CD or DVD
252. Which part of the operating system is loaded into RAM at start-up and remains present in memory?
a) Kernel
b) BIOS
c) Boot loader
d) Master Boot Record
253. How is the operating system typically stored in a personal computer?
a) Hard disk
b) ROM
c) CD or DVD
d) RAM
254. What is the general term for the process a computer follows from being turned on until the operating system is loaded?
a) POST
b) Bootstrap loader
c) BIOS
d) Booting
255. What is the purpose of the Power On Self Test (POST)?
a) To load the operating system into RAM

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

- b) To initialize the system components
- c) To execute the BIOS instructions
- d) To update the CMOS chip

256. Where is the system configuration data obtained from POST compared with?

- a) CMOS memory chip
- b) Hard disk
- c) Master Boot Record
- d) Bootable device

257. What is the size of the Master Boot Record?

- a) 256 bytes
- b) 512 bytes
- c) 1 KB
- d) 2 KB

258. Which component of the computer receives power and initiates the boot process?

- a) ROM circuitry
- b) Hard disk
- c) CMOS chip
- d) BIOS

259. What type of memory chip stores the system information and is updated when new components are added?

- a) PROM
- b) RAM
- c) ROM
- d) CMOS

300. What does the boot loader program do?

- a) Loads the BIOS instructions
- b) Executes the POST
- c) Initiates the loading of the operating system
- d) Updates the CMOS chip

261. What are the four steps of the instruction cycle performed by the CPU for each machine language instruction?

- a) Fetch, execute, store, write
- b) Fetch, decode, execute, store
- c) Load, decode, execute, write
- d) Load, process, store, write

262. Which register keeps track of the next instruction to be executed?

- a) Program Counter (PC)
- b) Instruction Register (IR)
- c) Address Register (AR)
- d) Control Unit Register (CUR)

263. What happens during the fetch step of the instruction cycle?

- a) The instruction is decoded
- b) The control signals are issued
- c) The instruction is loaded into the Instruction Register (IR)
- d) The result of the instruction is stored

264. What is incremented after the instruction is fetched from main memory?

- a) Program Counter (PC)
- b) Instruction Register (IR)
- c) Address Register (AR)
- d) Control Unit Register (CUR)
