- a) DNS
b) DHCP
c) ICMP
d) SNMP
20. Which of the following is not an example of an early internet service?
a) Email
b) File Transfer Protocol (FTP)
c) Telnet
d) Voice over IP (VoIP)
21. Who is credited with inventing the World Wide Web?
a) Tim Berners-Lee
b) Bill Gates
c) Steve Jobs
d) Mark Zuckerberg
22. What was the primary goal behind the development of the World Wide Web?
a) Facilitating online shopping
b) Enabling global communication and information sharing
c) Enhancing online gaming experiences
d) Promoting social media platforms
23. The first web browser developed by Tim Berners-Lee was called:
a) Google Chrome
b) Mozilla Firefox
c) Internet Explorer
d) WorldWideWeb
24. The basic building blocks of the web are:
a) URLs and domain names
b) Hyperlinks and HTML
c) IP addresses and DNS
d) HTTP and FTP
25. Which technology made it possible to display images, audio, and video on web pages?
a) CSS
b) HTML
c) JavaScript
d) Flash
26. The language used for structuring and presenting content on the web is:
a) HTML
b) CSS
c) JavaScript
d) PHP
27. The protocol commonly used for transferring data over the World Wide Web is:
a) HTTP
b) FTP
c) SMTP
d) TCP/IP
28. What does the term "URL" stand for in the context of the World Wide Web?
a) Uniform Resource Locator
b) Universal Routing Language
c) Uniform Retrieval Language
d) Universal Resource Library

29. Which organization oversees the development and standardization of web technologies?

- a) World Wide Web Consortium (W3C)
- b) Internet Engineering Task Force (IETF)
- c) International Organization for Standardization (ISO)
- d) Internet Corporation for Assigned Names and Numbers (ICANN)

30. The World Wide Web became publicly available in the year:

- a) 1989
- b) 1991
- c) 1993
- d) 1995

31. What is a web page?

- a) A program that retrieves and displays web content
- b) A document written in HTML that can be accessed through a web browser
- c) A server that hosts websites
- d) An organization that provides internet connectivity

32. Which of the following is a web browser?

- a) Apache
- b) Nginx
- c) Chrome
- d) DNS

33. What is the primary function of a web browser?

- a) Hosting websites

b) Serving web pages to users

c) Transferring data over the internet

d) Retrieving and displaying web content

34. What is a web server?

- a) A device that connects multiple networks together
- b) A software application that delivers web pages to client devices upon request
- c) An organization that provides internet connectivity
- d) A protocol for transferring files over the internet

35. What does ISP stand for?

- a) Internet Server Protocol
- b) Internet Service Provider
- c) Internal Security Protocol
- d) International Standards and Practices

36. What is the role of an ISP?

- a) Serving web pages to users
- b) Hosting websites
- c) Providing internet connectivity to users
- d) Transferring data over the internet

37. What is a gateway in the context of networking?

- a) A device that connects a computer network to the internet
- b) A software application used for browsing the web

SUNRISE CLASSES

- c) A web server responsible for hosting websites
d) An organization that provides internet connectivity
38. Which component is responsible for translating domain names into IP addresses?
a) Web server
b) ISP
c) Gateway
d) DNS server
39. Which of the following is an example of a popular web browser?
a) Apache
b) IIS
c) Firefox
d) SMTP
40. Which of the following is not a common web server software?
a) Apache
b) Nginx
c) IIS
d) HTML
41. What is the purpose of a firewall in computer networks?
a) To protect against viruses and malware
b) To provide internet connectivity to devices
c) To filter network traffic and enforce security policies
d) To translate domain names into IP addresses
42. Which of the following is an example of a top-level domain (TLD)?
a) .com
b) HTTP
c) TCP/IP
d) HTML
43. What does the term "HTML" stand for in the context of web development?
a) HyperText Markup Language
b) Hypertext Transfer Protocol
c) Hypertext Transfer Protocol Secure
d) Hyperlink and Text Markup Language
44. What is the function of a DNS server?
a) To store and retrieve website content
b) To route network traffic between devices
c) To translate domain names into IP addresses
d) To ensure secure communication between web servers and browsers
45. Which protocol is commonly used for sending and receiving emails?
a) SMTP
b) HTTP
c) FTP
d) DNS

46. What is the purpose of a cookie in web browsing?

- a) To enhance website security
- b) To store user preferences and session information
- c) To compress web page content for faster loading
- d) To encrypt data transmitted between web servers and browsers

47. Which organization is responsible for assigning IP addresses globally?

- a) ICANN
- b) W3C
- c) IETF
- d) IEEE

48. What is the purpose of a VPN (Virtual Private Network)?

- a) To host websites on the internet
- b) To provide secure remote access to a private network
- c) To filter and block unwanted network traffic
- d) To convert analog signals into digital signals

49. Which of the following is an example of a cloud storage service?

- a) Dropbox
- b) SSH
- c) Telnet
- d) HTTP

50. What does the term "URL" stand for in the context of web addresses?

- a) Uniform Resource Locator

b) Universal Routing Language

c) User Registration Link

d) User Retention Log

51. What does the acronym "URL" stand for?

- a) Universal Routing Language
- b) Universal Resource Locator
- c) Uniform Resource Locator
- d) User Registration Link

52. What is the purpose of a URL?

- a) To identify the type of internet connection
- b) To specify the location of a web resource
- c) To define the format of a web page
- d) To establish a secure connection between client and server

53. Which part of a URL specifies the protocol being used?

- a) Host
- b) Path
- c) Query string
- d) Scheme

54. Which of the following is an example of a protocol used in a URL?

- a) HTTP
- b) .com
- c) www
- d) /home

55. In the URL

"https://www.example.com/index.h

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

tml" what does

"www.example.com" represent?

- a) Protocol
- b) Host
- c) Path
- d) Query string

56. What is the purpose of a protocol in a URL?

- a) It identifies the server hosting the web resource
- b) It defines the format of the web page
- c) It specifies the type of connection between client and server
- d) It determines the path to the web resource

57. Which part of a URL identifies the specific resource or page on the web server?

- a) Protocol
- b) Host
- c) Path
- d) Query string

58. Which component of a URL contains additional parameters or data to be sent to the web server?

- a) Protocol
- b) Host
- c) Path
- d) Query string

59. In the URL "http://www.example.com/product s/index.html," what does "/products/index.html" represent?

- a) Protocol
- b) Host
- c) Path
- d) Query string

60. What is the purpose of the path component in a URL?

- a) It specifies the location of the web server
- b) It identifies the specific resource or page on the web server
- c) It contains additional parameters or data to be sent to the web server
- d) It determines the format of the web page

61. What is a search engine?

- a) A software used to create websites
- b) A program that connects to the internet
- c) An online service that retrieves and displays search results
- d) A device used to access the World Wide Web

62. Which of the following is a popular search engine?

- a) HTML
- b) JavaScript
- c) Google
- d) CSS

63. What is the primary purpose of a search engine?

- a) To host websites and web pages
- b) To provide internet connectivity to users

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

- c) To index and retrieve web pages based on user queries
- d) To transfer data between web servers and browsers

64. How do search engines gather information about web pages?

- a) By using social media platforms
- b) By scanning and indexing web pages
- c) By directly contacting website owners
- d) By conducting surveys and polls

65. Which component of a search engine determines the relevance of web pages to a user's query?

- a) Web crawler
- b) Index
- c) Algorithm
- d) Query processor

66. What is the purpose of a web crawler in a search engine?

- a) To display search results to users
- b) To retrieve and index web pages
- c) To analyze user queries
- d) To provide internet connectivity to users

67. Which search engine introduced the concept of PageRank?

- a) Yahoo
- b) Bing
- c) Google
- d) DuckDuckGo

68. What does the term "SERP" stand for in the context of search engines?

- a) Search Engine Ranking Position
- b) Search Engine Result Page
- c) Search Engine Retrieval Process
- d) Search Engine Ranking Protocol

69. Which factor does a search engine consider to rank web pages in search results?

- a) Number of social media followers
- b) Page loading speed
- c) Frequency of website updates
- d) Relevance and quality of content

70. What is the purpose of search engine optimization (SEO)?

- a) To block search engines from accessing web pages
- b) To improve the visibility and ranking of web pages in search results
- c) To analyze user behavior on web pages
- d) To encrypt data transmitted between web servers and browsers

71. Which type of internet connection uses a telephone line for transmitting data?

- a) DSL
- b) Fiber optic
- c) Satellite
- d) Cellular

73. Which type of internet connection uses radio waves to transmit data?

- a) Fiber optic
- b) DSL
- c) Dial-up
- d) Wireless

74. Which internet connection type requires a modem and a physical cable to connect to the internet?

- a) Satellite
- b) Dial-up
- c) Fiber optic
- d) Wireless

75. Which of the following internet connection types provides internet access through a television cable network?

- a) Fiber optic
- b) Dial-up
- c) Cable
- d) DSL

76. Which type of internet connection offers a dedicated, always-on connection to the internet?

- a) Dial-up
- b) DSL

- c) Fiber optic
- d) Leased line

77. Which internet connection type is typically used in rural or remote areas where other connections may not be available?

- a) Fiber optic
- b) DSL
- c) Satellite
- d) Cellular

78. Which type of internet connection utilizes optical fibers to transmit data at high speeds?

- a) Satellite
- b) Cable
- c) Fiber optic
- d) Dial-up

79. Which internet connection type uses cellular networks to provide internet access?

- a) Dial-up
- b) Fiber optic
- c) DSL
- d) Cellular

80. Which of the following internet connection types offers mobility and can be accessed wirelessly from various locations?

- a) DSL
- b) Dial-up
- c) Fiber optic
- d) Cellular

81. Which type of internet connection offers a dedicated, private, and secure connection between two locations?

a) Sending physical mail
b) Making phone calls
c) Accessing and sharing information
d) Broadcasting television programs
92. Which of the following is a common use of the internet in the field of education?
a) Conducting scientific experiments
b) Organizing physical libraries
c) Writing letters
d) Sharing research papers and resources
93. How does the internet contribute to the field of entertainment?
a) By producing movies and TV shows
b) By creating video games
c) By offering streaming services for music, movies, and TV shows
d) By publishing books and magazines
94. Which of the following is a popular use of the internet in the business sector?
a) Conducting financial transactions
b) Operating physical stores
c) Printing physical documents
d) Manufacturing products
95. How does the internet facilitate communication?
a) By delivering physical letters
b) By providing instant messaging and video conferencing
c) By sending fax messages
d) By organizing face-to-face meetings
96. What is one of the ways the internet is used in the healthcare industry?
a) Performing surgeries remotely
b) Developing new medicines
c) Operating hospitals
d) Providing telemedicine and online consultations
97. How does the internet contribute to the field of e-commerce?
a) By building physical retail stores
b) By printing physical catalogs
c) By offering online shopping platforms
d) By delivering products through traditional mail
98. Which of the following is a common use of the internet in social interactions?
a) Attending physical parties and gatherings
b) Sending physical greeting cards
c) Connecting with friends and family through social media
d) Writing letters

99. How does the internet support research and information gathering?

- a) By visiting physical libraries
- b) By conducting experiments in laboratories
- c) By providing access to online databases and resources
- d) By publishing academic journals

100. What is one of the ways the internet is used in the field of governance?

- a) Conducting physical voting in elections
- b) Drafting physical legislation
- c) Facilitating online government services and transactions
- d) Organizing physical town hall meetings

101. What is one of the main concerns related to online privacy?

- a) Slow internet speed
- b) Unauthorized access to personal information
- c) Limited access to websites
- d) Lack of online shopping options

102. What is a potential risk associated with cyberbullying?

- a) Increased productivity in online communities
- b) Enhanced social connections
- c) Emotional distress and psychological harm
- d) Improved communication skills

103. What is one of the hazards of online scams and frauds?

- a) Enhanced online security measures
- b) Increased economic stability
- c) Financial loss and identity theft
- d) Improved customer service experiences

104. What is a potential danger related to excessive screen time and internet addiction?

- a) Improved physical fitness and well-being
- b) Enhanced cognitive abilities
- c) Sleep disturbances and sedentary lifestyle
- d) Increased productivity and efficiency

105. What is one of the concerns regarding cybercrime?

- a) Stronger cybersecurity measures
- b) Decreased reliance on digital platforms
- c) Unauthorized access to personal and financial information
- d) Improved international cooperation in law enforcement

106. What is a potential risk associated with inappropriate content on the internet?

- a) Enhanced educational resources
- b) Improved creativity and critical thinking

115. What is one of the primary benefits of e-commerce on the internet?

- a) Limited product variety
- b) Higher prices compared to physical stores
- c) Convenience and accessibility for online shopping
- d) Lack of customer reviews and ratings

116. Which of the following is a common use of the internet in online banking?

- a) Depositing physical checks at the bank
- b) Withdrawing cash from physical ATMs
- c) Accessing bank accounts and conducting financial transactions online
- d) Meeting with bank representatives in person

117. What is the primary purpose of email?

- a) Sending physical mail
- b) Making phone calls
- c) Sending and receiving electronic messages
- d) Sharing files through a network

118. Which of the following is a potential risk associated with email attachments?

- a) Enhanced productivity and collaboration
- b) Increased storage capacity
- c) Virus infections and malware distribution
- d) Improved email filtering and spam protection

119. What is a common characteristic of a computer virus?

- a) Improving system performance
- b) Enhancing data security
- c) Replicating and spreading through computer systems
- d) Providing online storage services

120. How can viruses be transmitted through email?

- a) By physical mail delivery
- b) Through phone calls
- c) Via infected email attachments or links
- d) By direct message sharing on social media

121. What is a potential consequence of falling victim to a virus-infected email attachment?

- a) Improved computer performance
- b) Enhanced data backup solutions
- c) Loss or corruption of files and data
- d) Increased network speed

122. How can individuals protect themselves from email-based viruses?

- a) Avoiding email communication altogether
- b) Opening every email attachment received
- c) Installing antivirus software and regularly updating it
- d) Sharing personal information via email

123. What is a common method used to spread email viruses?

- a) Sending physical letters
- b) Manually copying files to external storage devices
- c) Mass email distribution to unsuspecting recipients
- d) Posting on social media platforms

124. How can users identify potential email viruses?

- a) By analyzing the email sender's physical address
- b) By examining the email's subject line
- c) By opening every email received
- d) By checking the email for spelling errors and grammar mistakes

125. Which type of virus disguises itself as a legitimate program but performs malicious actions in the background?

- a) Worm

- b) Trojan horse
- c) Boot sector virus
- d) Spyware

126. What is a characteristic of a worm virus?

- a) Attaches itself to executable files
- b) Spreads by replicating and sending copies of itself to other computers
- c) Modifies the boot sector of the computer's hard drive
- d) Records and transmits sensitive user information

127. Which type of virus infects the boot sector of a computer's hard drive?

- a) Adware
- b) Ransomware
- c) Boot sector virus
- d) Keylogger

128. What is the primary purpose of a ransomware virus?

- a) Stealing sensitive information
- b) Displaying unwanted advertisements
- c) Locking or encrypting files and demanding a ransom for their release
- d) Tracking user activities on the internet

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

Explanation

1. The correct answer is c) SMTP
SMTP stands for Simple Mail Transfer Protocol and is the standard protocol used for sending and receiving emails over the Internet.

2. The correct answer is a) Uniform Resource Locator

URL stands for Uniform Resource Locator. It is the address or unique identifier that specifies the location of a resource on the internet, such as a webpage or a file.

3. The correct answer is c) Microsoft Word

Microsoft Word is not a web browser. It is a word processing software used for creating and editing documents. Web browsers are software applications used to access and view websites.

4. The correct answer is a) HyperText Transfer Protocol
HTTP stands for HyperText Transfer Protocol. It is the protocol used for transmitting hypertext, such as HTML, over the internet. It defines how web browsers and web servers communicate with each other.

5. The correct answer is a) HTTPS

HTTPS stands for Hyper Text Transfer Protocol Secure. It is a secure version of HTTP that encrypts data transmitted between a web browser and a web server. It is commonly used for secure online transactions, such as online banking or e-commerce.

6. The correct answer is a) ICANN
ICANN (Internet Corporation for Assigned Names and Numbers) is the organization responsible for coordinating and managing the assignment of IP addresses and domain names. It ensures the stable and secure operation of the internet's unique identifier systems.

7. The correct answer is a) Hypertext Markup Language
HTML stands for Hypertext Markup Language. It is the standard markup language used for creating web pages. It defines the structure and presentation of content on the web.

8. The correct answer is d) .exe
.exe is not a valid domain extension. It is a file extension used for executable files in Windows operating systems. Valid domain extensions include .com, .net, .org, and many others.

@ISS COACHING DELHI SUNRISE CLASSES

SERVICE, TRUST & RESULT

SUNRISE CLASSES

9. The correct answer is b) Facebook

Facebook is an example of a social media platform. It is a popular online platform that allows users to connect with friends, share content, and engage in various social activities.

10. The correct answer is a) FTP

FTP stands for File Transfer Protocol. It is a common internet protocol used for transferring files between a client and a server on a computer network. It is often used for uploading and downloading files to and from web servers.

11. The correct answer is a) ARPANET, developed by the Advanced Research Projects Agency (ARPA), was the first network to implement packet switching.

12. The correct answer is a) The birth year of the internet is generally considered to be 1969 when the first message was sent between two computers connected through ARPANET.

13. The correct answer is b) The transition from IPv4 to IPv6 was primarily driven by the depletion of available IPv4 addresses due to the rapid growth of internet-connected devices.

14. The correct answer is c) HTTPS (HyperText Transfer Protocol Secure) was introduced to enable secure online communication by

encrypting data transmitted over the internet.

15. The correct answer is a) Tim Berners-Lee proposed the concept of the World Wide Web (WWW) and developed the first web browser.

16. The correct answer is a) Search engines revolutionized internet search by providing a convenient way to find information online.

17. The correct answer is a) Wi-Fi technology allows users to connect to the internet without a wired connection.

18. The correct answer is c) JavaScript, a programming language, enabled the development of interactive and dynamic web content.

19. The correct answer is a) DNS (Domain Name System) is responsible for translating domain names into IP addresses, allowing users to access websites using human-readable names.

20. The correct answer is d) Voice over IP (VoIP) is not an example of an early internet service. It refers to the transmission of voice communications over internet protocols, which became more prevalent in later years.

21. The correct answer is a) Tim Berners-Lee is credited with inventing the World Wide Web.
